EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Emma Start (Agent # 52534) on March 17, 2006. The application has been amended as follows:

- a. In claim 11, line 5, please insert -- said movable member being formed of a plurality of interchangeable modular components, -- between the words "support," and "said".

ALLOWABLE SUBJECT MATTER

2. The following is an examiner's statement of reasons for allowance:
 - a. Regarding **claim 1** and all claims depending therefrom, the prior art lacks sufficient disclosure or suggestions for a traffic-signaling device for redirecting oncoming traffic comprising a movable member suitable for attachment to a support. The movable member being formed of multiple modular components, wherein the modular components can be assembled in any order in order to form the movable member. These along with the other limitations set forth render the set of claims allowable over the prior art of record.
 - b. Regarding **claim 11** and all of its dependent claims, the prior art of records fails to teach or fairly suggest a traffic-signaling system comprising a plurality of traffic-

signaling devices, wherein each signaling device comprises a movable member. The movable member is formed of a plurality of interchangeable modular components. Each device also comprises a drive system for causing the movable member to move between a first and second position, and a solar powered control system suitable for receiving wireless signals for causing the drive system to activate. These along with further limitations set forth render the claim set allowable over the prior art.

c. Claims 29, 30 and all claims depending therefrom, are allowed. The prior art of record fails to teach or fairly suggest a traffic-signaling device or system wherein a moveable member is controlled by a drive system to provide information to oncoming traffic and wherein the drive system is remotely controlled. The traffic-signaling device(s) solar powered control system is capable of communicating over a wireless transmission link with at least one other solar powered control system of another traffic-signaling device. These along with other limitations set forth, render these claims allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
